IDENTIFIERS	Arrests; Child Mortality; Day Care Availability; *Indiana; *Indicators

ABSTRACT

This Kids Count data book examines statewide trends in the well-being of Indiana's children. The statistical portrait is based on more than 50 indicators of child well-being in the areas of: (1) demographics; (2) economic well-being; (3) early childhood; (4) child protection; (5) health and well-being; (6) education; and (7) juveniles and the law. The data book begins with introductory comments, 2002 youth worker study overview, data book highlights, and information on use of the data book. The second section contains state summary data on indicators in the areas of: (1) children and their families; (2) families in need; (3) child abuse and neglect; (4) healthcare; (5) K-12 education; (6) alcohol, tobacco, and other drug use; and (7) after school time. The remainder and bulk of the data book contains state and county profiles for the indicators, with comparison data for the current year and a baseline year. The data indicate an increase in nutritional assistance, fatalities from abuse and neglect, and graduation rate. The data indicate a decrease in low birthweight babies, teen births, infant mortality, and 8th grade smokers.(SD)

About Kids Count 2002

Kids Count in Indiana is part of a network of projects in 50 states, the District of Columbia, and the Virgin Islands coordinated and supported by the Annie E. Casey Foundation.

A project of the Indiana Youth Institute, **Kids Count in Indiana** is a state and county-by-county effort to track the status of children in Indiana. By providing practitioners, policy makers, and citizens with trends in child well-being, Kids Count in Indiana seeks to enrich community, county, and state discussions about ways to secure better futures for all children. At the state level, the principal activity of the project is the publication of the annual *Kids Count in Indiana Data Book*, which uses the best available data to measure the healthy development of youth.

Indiana Profile 36

County Profiles 38

Family matters. Community matters. Youth Organizations matter.

Boys and Girls Club leader Kevin Deary thought he was in for a relaxing evening with his family, when the phone rang. Three kids—a teenager and his two younger brothers—were breaking into the club's new Goshen facility when they were apprehended by police.

Deary asked the officer for a chance to talk with the young people before they were taken to the police station. Driving from his home in southern Elkhart County, the veteran youth worker realized the boys were experiencing a night that could change the rest of their lives – one way or another.

"I'll make you a deal," Deary announced to the boys upon arriving on the scene. The two younger boys seemed eager to learn of any options that might not include going to jail. But their older brother remained defiant - arms crossed, back rigid, face expressionless except for eyes shooting a steely glare. "Here's the deal. You join my Boys and Girls Club...tonight...and I'll pay your membership fees...or...you get arrested and go to jail."

The little brothers looked up anxiously at their older sibling. They had always looked up to him since the day their father was sentenced to seventy-two years in prison for dealing drugs while their mother remained virtually nonexistent by consuming the products her husband once sold. This new offer on the table seemed too good to be true. Free membership to the coolest youth center in the community. Instead of needing to break in, someone was willing to pay their way so they could walk in through the front door like everyone else. Wow, what a bargain.

The oldest, however, did not flinch.

"I'm telling you," Deary continued, "here is the deal of your lifetime. Free membership in the Boys and Girls Club, or jail. If you want to join the club, you come over here and stand by me. If you'd rather go to jail, stay right there next to the police officer. It's your decision."

The youngest boys could take the suspense no longer. Fully persuaded, they darted to Deary's side. The oldest, however, remained behind.

"O.K., partner, it's all in your hands," Deary said to the tenacious teen. "But I want you to know that it's all or none. Either all three of you join the club, or all three of you get arrested. Now, you don't want your little brothers going to jail, do you?"

To this day, Deary isn't sure what closed the deal: his persistence or the look in the eyes of the little boys toward their teenage brother, imploring him to accept the offer of deliverance. But accept he did, and Deary now is quite sure of the boys' transformation. All three remain active in the club, with the oldest in line to graduate from high school and be named the club's "Youth of the Year."

This story confirms yet again the basic truth of healthy youth development. What all kids need most are positive relationships with caring adults who are passionately committed to their very existence. First and foremost in their family, ideally with two married parents[1], and also in their surrounding community. Yes, these relationships can ensure the fulfillment of basic needs such as food, shelter and safety, and caring adults also can provide interventions for children suffering from physical or emotional health problems. More importantly, however, these relationships reach deeper into the very human essence of the child.

While the process is intangible, the outcomes are not. Research supports common sense. When children have those positive and caring relationships—in their families and in their communities—they tend to do better in life however we want to measure. They tend to do better in school, delay parenthood until marriage, avoid crime and stay away from cigarettes, drugs and alcohol. Civil society indeed is decisive in the healthy development of children and youth.

Just ask the kids. More than 100,000 teens were surveyed or interviewed in a national longitudinal study commissioned by Congress through the National Institutes of Health. Conducting the National Longitudinal Study of Adolescent Health (Add Health), researchers provided anonymous questionnaires to nearly 90,000 students, grades seven through twelve, in 145 American schools. An additional 35,000 students provided information during in-home interviews. While a thorough analysis of the data will not be available for several years, an initial overview provides important learnings.[2]

One-fourth of adolescents said they smoke cigarettes, about half that number reported smoking marijuana in the previous month, and just under eighteen percent reported drinking alcohol more than once a month. Over ten percent of boys and more than five percent of girls reported committing a violent act in the past year. Nine percent of young people reported having suicidal thoughts, while four percent have actually attempted suicide. Nearly half of the teens said they have experienced sexual intercourse.[3]

But the adolescents also described what connections help them avoid those dangerous behaviors. Not surprisingly, family matters most. As researchers Robert Blum and Peggy Mann Rinehart summarize, "Across all of the health outcomes examined, the results point to the importance of family and the home environment for protecting adolescents from harm. What emerges most consistently as protective is the teenager's feeling of connectedness with parents and family."[4]

But even the strongest families are not enough. That's where the influences of local community arise. Sociologist Robert Putnam views

You matter. Indeed. Kids Count . . . On You!

community impact through the lens of "social capital," most often demonstrated by neighbors who interact with each other on a frequent basis and who participate in civic and voluntary organizations. In the context of child well-being, Putnam confidently states, "Child development is powerfully shaped by social capital."[5]

Putnam has developed a national measurement of social capital by state—the Social Capital Index—and he compares the index against data on child well-being from the Kids Count indexes published and supported by the Annie E. Casey Foundation. Putnam concludes, "States that score high on the Social Capital Index—that is, states whose residents trust other people, join organizations, volunteer, vote, and socialize with friends—are the same states where children flourish: where babies are born healthy and where teenagers tend not to become parents, drop out of school, get involved in violent crime, or die prematurely due to suicide or homicide. Statistically, the correlation between high social capital and positive child development is as close to perfect as social scientists ever find in data analyses of this sort."[6]

As demonstrated by Kevin Deary and the Boys and Girls Club of Goshen, grassroots youth agencies are a vital factor in the formula of healthy community youth development. The National Research Council (NRC), reviewing two decades of studies, finds that the most successful community youth organizations enjoy the following eight characteristics:

Physical and Psychological Safety: At the most basic level, safety is essential for positive development.

Clear and Consistent Structure and Appropriate Adult Supervision: Development requires that a child experience a stable, predictable reality...A critical element of structure is consistent monitoring and enforcement of rules and expectations.

Supportive Relationships: The quality of relationships with adults comes up again and again as a critical feature of any developmental setting.

Opportunities to Belong: One of the first issues for an adolescent walking through the door or even thinking about trying a community program is whether he or she can belong to this group of people: 'Will I fit in, will I be comfortable?'.

Positive Social Norms: Community programs have an internal culture of social norms that shapes youths' perception of appropriate behavior for good or ill, depending on the social norms that emerge.

Support for Efficacy and Mattering: If adolescents do not experience personal engagement and a sense of mattering, they are not likely to grow personally.

Opportunities for Skill Building: Good settings provide opportunities to acquire knowledge and learn both new skills and new habits of mind.

Integration of Family, School, and Community Efforts: There is every reason to believe that community programs will be more effective when they coordinate their activities with parents, schools, and communities.[7]

The NRC emphasizes, "The more of the eight positive features described (here) that a community program has, the greater the contribution it will make to the positive development of youth."[8]

Keep these findings in mind as you read and utilize the information in this data book. Family matters. Community matters. Youth organizations matter. You matter. Indeed. Kids Count...On You!

And as you do so, maintain the hope displayed by the child in the following story told by Youth As Resources founder Jack Calhoun during a recent visit to Indiana.

A man was walking his dog in the park when he came upon a Little League baseball game. The man noticed that the boy playing third base obviously was happy. The boy bounced up and down on his toes, twirled his mitt during breaks in the action, and generally had a joyous expression on his face.

"Hey," the man called out to the budding baseball star, "you look so happy. Your team must be winning."

"No," the boy replied, "we're losing 87 to nothing."

"What?!?," the man exclaimed. "Then why are you so happy?"

"Our team hasn't been up to bat yet."

2002 Youth Worker Study Overview

The indicators reported in the *2002 Kids Count in Indiana Data Book* portray the latest snapshot of child well-being in the Hoosier State. Statistics on child abuse and neglect, smoking and substance abuse, poverty, education, health, and juvenile justice confront parents, neighbors, civic leaders, and policymakers with an opportunity to improve the living conditions of Indiana children and youth.

Solutions are as complex as challenges. No single answer is available. Families must be stronger. Communities need to be more supportive. Intervention and treatment often are vital.

This formula also includes the important and unique role played by grassroots youth agencies. That's why the Indiana Youth Institute provides a wide range of practical services designed to build the capacity of youth organizations in their essential work with children and youth. These services have been designed and delivered in direct response to surveys, input, and feedback from the youth agencies themselves.

IYI recently conducted a blind, random survey of the state's youth workers. The Institute is indebted to the professionals who served as objective advisers to this project:

- Bill Barton (Indiana University)
- Mike Cabat (Indiana Association of United Ways)
- Cecilia Johnson (United Way of Central Indiana)
- Heather Johnston Nichols (Girls Incorporated National Resource Center)
- Shelley MacDermid (Purdue University)
- Patricia Muller (Indiana Center for Evaluation)
- Jorge Perez (YMCA of Greater Indianapolis)
- Dixie Ray (Evaluation consultant)
- Mary Williams (Evaluation consultant)
- Judith Erickson (Youth work consultant)

These findings can help residents, community leaders, and policymakers surround youth agencies with the help they need to make a real difference in the life of a child.

Who are Indiana's youth workers?

- A typical direct service youth worker is a 38 year-old white female in the profession eight years. A typical administrator is a 46 year-old white female in the profession fifteen years. Both have earned either a bachelor's or master's degree in social/human services or education.
- 78% of youth workers in Indiana are white; 19% are African-American; 1% are Hispanic; 1% are American Indian; 1% are Asian/Pacific Islanders.
- Gender: 65% are female; 35% are male.
- The median salary range for full-time administrators is $35,000 – $39,999, and for full-time direct service youth workers, it is $25,000 – $29,999.

What do Indiana's youth-serving organizations look like?

- The median staff size of the organizations represented was 10, with 60% of the staff classified as full-time workers and part-time workers accounting for 40%.
- Not counting board members, 73% of respondents reported their organizations utilize more than 10 volunteers to deliver services, with 31% reporting their organizations utilized more than 100 volunteers.
- At least 95% of youth workers have access to a computer, a copy machine and a fax machine, and many youth workers are making these technologies available to the youth they serve.

What do Indiana's youth workers do?

- On average, staff hired as direct service youth workers spend approximately 64% of their time working directly with kids, while administrators report spending 14% of their time working directly with youth.
- The rewards of working in the youth development field as reported by survey respondents include working with children, building relationships with youth, watching kids grow, and making a difference in the lives of young people.
- Among the most prevalent challenges youth workers report facing are lack of monetary support, lack of staff, long hours for low pay, lack of parental commitment, and resistance from community leaders.

For a complete report on the Indiana Youth Institute's 2002 Youth Worker Study, please go to www.iyi.org, or request a copy from IYI's Fax on Demand service at toll free 1-877-550-FAXX (3299), document number 113.

Kids Count – The Highlights

The *Kids Count in Indiana 2002 Data Book: County Profile of Child Well-being*, ninth in the series, is an important tool for planning and action by community leaders, policy makers, youth workers, advocates, and others working to improve the lives of Indiana's children. The data book reports on more than 50 of the most current and reliable indicators of child health and well-being for the state of Indiana and each of its 92 counties. Additionally, seven important areas of child well-being are more closely examined in the narrative section of the book: Indiana's children and their families, families in need, child abuse and neglect, health and well-being, education, alcohol, tobacco and other drug use, and afterschool time.

Information in the data book is selected based on three criteria: the reliability and availability of current and future data for the state of Indiana and each county, the role each indicator plays in ascertaining levels of child health and well-being, and feedback from data book users on what information is important to them. The book sets forth important indicators for use by communities and individuals to assess needs, set priorities, identify strategies to build on strengths and address weaknesses, and monitor progress toward goals.

The data also can be used by youth organizations for program planning and evaluation, fund raising and marketing, volunteer recruitment, and media relations. Highlights from this year's data book include:

- In 2000, 72.4% of Indiana families with children under the age of 18 were headed by a married couple, 20.9% were headed by single mothers, and 6.9% were headed by single fathers.
- Based on 1998 income, an estimated 14.1% of Hoosier children younger than age 18 (compared with 18.9% nationally) live in families with incomes below the poverty threshold.
- 10.2% of all Indiana families with children younger than age 18 lived in poverty in 1999, and 30.4% of families headed by a single mother with children younger than age 18 lived in poverty in 1999.
- In Indiana, approximately 180,000 (13%) children lived in low-income working families in 1999.
- In SFY 2001, a monthly average of 331,206 Hoosiers (5.9% of Indiana's population) received nutritional assistance through the food stamp program, up from 11.4% in SFY 2000.
- Fatalities from abuse and neglect rose to 45 in SFY 2001, up from 44 who died in SFY 2000, but fewer than the 65 children who died in SFY 1998.
- The percentage of Hoosier mothers beginning prenatal care in the first trimester in 2000 (79.4%) remained relatively unchanged from 1999 (79.5%), but still lags behind the national rate of 83.2%.
- Pregnant Hoosier woman were much more likely to smoke than pregnant women nationally—20.2% versus 12.2% in 2000.
- The percentage of low birthweight babies in Indiana decreased in 2000 to 7.3%, down from 7.8% in 1999.
- In 2000, the birthrate among Hoosier women ages 15-19 reached an all-time low of 49.1 births per 1,000 females in that age group, down from 64.1 per thousand in 1995.
- One in three (34.6%) births in Indiana were non-marital—above the figure for the U.S. as a whole (33.0%).
- Indiana's infant mortality rate (death before the first birthday), although declining, remains higher than the national rate. The Indiana infant mortality rate declined slightly from 7.8 per 1,000 live-born infants in 1999 to 7.7 deaths in 2000. The national rate also declined, falling from 7.2 in 1999 to 6.9 deaths per 1,000 in 2000.
- The IDOE reports a preliminary graduation rate for the Class of 2001 of 89.3%, up from the Class of 2000 rate of 89.5%.
- The number of public school graduates in SY 2000-2001 represents 70.9% of the number of students enrolled as freshmen in SY 1997-1998.
- Hoosier children will begin attending the state's first 13 charter schools in the Fall of 2002.
- Since 1997, the percent of 8th graders who reported smoking during the past month dropped from 25.8% to 14.7%.
- Alcoholic beverages are still the most commonly used substances among Indiana's youth. In 2002, 20.4% of 6th graders, 43.8% of 8th graders and 59.5% of 10th graders reported consuming alcohol during the past year.
- One in five (20.5%) Hoosier 12th graders reported using marijuana during the past month in 2002.
- In 2002, nearly one quarter of Indiana 6th graders regularly spend some portion of their afterschool hours at home unsupervised by adults ("regularly" means more than 30 days per school year).

Using the Kids Count Data Book

The *2002 Kids Count in Indiana Data Book* brings together a great deal of information about Indiana's youngest citizens and their families. The data come from many sources and in many forms; altogether, they provide a picture of how well Indiana's young people and their families are faring.

Where do the data come from?

The Indiana Youth Institute (IYI) does not generate the statistical information contained in the data book. Most of the numbers are supplied by Indiana state agencies such as the Indiana State Department of Health, the Indiana Family and Social Services Administration, the Indiana Department of Correction, and the Indiana Department of Workforce Development that collect the information for administrative purposes. Some of the numbers come from federal sources such as the U.S. Census Bureau, the Centers for Disease Control and Prevention, and the U.S. Department of Education. Also included is information from studies conducted by academic institutions and research organizations such as the Indiana Prevention Resource Center and the Indiana Business Research Center. For information about a specific indicator, consult the "Definitions and Data Sources" section.

Are the numbers accurate?

Every effort is made to ensure that the numbers in the data book are accurate. Errors do creep in, however. Some errors may be made when the information is collected, others when it is transferred to an electronic database and still others when it is reported. When IYI recognizes that an error has been made in the book, an "errata notification" is published. Where there are known problems with an indicator, we try to point them out. Further information can be found in the endnotes and in the "Definitions and Data Sources" section.

Many indicators are expressed in the form of rates, calculated either directly on census population data or on annual population estimates created by the U.S. Census Bureau. New information from the U.S. 2000 Census will continue to be released through 2003. The new census data will provide the statistical base for the first decade of the twenty-first century.

Why are some of the numbers so old?

This data book contains the most current information available at press time. State agencies, the sources for most of the data, must collect information from all 92 counties and compile it into a single data set for the state as a whole. This can be a daunting task, particularly in those county-level agencies that still do not have computer systems available. Periodically, IYI will update the online Kids Count Database on IYI's Web site when updated information becomes available. It may also be possible to obtain more recent information from state agencies through the Access Indiana Information Network, the state's official Web site (www.state.in.us), or directly from the county offices that collect the information for the state.

State and county profiles

The profiles for Indiana and each of the 92 counties contain more than 50 indicators related to the well-being of Hoosier young people. Most of the indicators appear year after year. They have been chosen because:

- The data come from a reliable source;
- The data are available for the state and each county;
- The data are gathered in the same way each year and will probably be available in the future, and
- Data book users have told us this is the information they need.

The information provided in the data book allows you to ask such questions as:

- How is my county doing overall?
- How do the most current numbers compare with base year figures?
- What indicators appear to be moving in a positive direction? In a negative direction?
- How does my county compare with the state as a whole?
- How does my county compare with neighboring counties or with counties of similar size?

The answers to such questions can be helpful in discussing what research, planning and action are necessary to improve the well-being of the young people in your county.

Some Cautions For Interpreting Data

We offer the following precautions for using the information in this data book.

Understand the indicator: Understand what is being measured and how the information is presented. Some figures represent actual numbers while others are given as rates or percentages. ***Rates*** and ***percentages*** permit comparisons from one group or county to another, or for different years in the same group or county. ***"Percent change"*** indicates how much change has occurred between two points in time. Percent change is calculated using the formula:

$$\frac{\text{Value at Time 2} - \text{Value at Time 1}}{\text{Value at Time 1}} \times 100 = \text{Percent Change}$$

Beware of small numbers: Indiana's counties vary greatly in size and composition. What may be a fairly regular event in one county may be a very rare event in another. There may also be greater variations from year to year in some counties than in others. In general, the smaller the county the smaller the number of some events that can be expected to occur. For example: If two child deaths occur in County X in 1997, but three deaths occur the following year (1998), there will be a 50% rise in child deaths between 1997 and 1998. If only one death occurs in 1999, there will be a 67% decrease in child deaths between 1998 and 1999. Using the above formula, the calculations would be as follows:

% change between 1998 (Time 2) and 1997 (Time 1):

$$\frac{3-2}{2} \times 100 = \frac{1}{2} \times 100 = .5 \times 100 = 50\% \text{ increase}$$

% change between 1999 (Time 2) and 1998 (Time 1):

$$\frac{1-3}{3} \times 100 = \frac{-2}{3} \times 100 = -.67 \times 100 = 67\% \text{ decrease}$$

In the case of "rare events," longer trends rather than year-to-year differences are more useful as a gauge of whether progress is being made toward improving the well-being of your county's children.

Many indicators are related: Look at the patterns among indicators in your county. Unemployment rates and poverty are obviously related. Perhaps less obvious are the relationships among teen births, maternal smoking, low birthweight, and infant mortality. Talk with people in your community to help uncover more subtle links among the indicators. Share information with people from other counties; find out what they are doing to promote change.

Remember the limits and uses of data: Numerical data provide important information, but they are just one type of information. A number may reflect more or less accurately how many Hoosier children live below the poverty line, but a number cannot describe the day-to-day complexities for a family living in need. A number can tell us how many Hoosier infants are born too soon or too small, but a number cannot express the anxieties of parents who watch their tiny children struggle for life. A number can tell us how many Hoosier children have completed high school, but a number cannot describe the efforts of families, teachers, and students themselves that brought them to this point, nor can a number express the pride in accomplishment that comes with the diploma.

Numbers must be used with care, and their meaning must derive from what is actually happening in the lives of the people represented by the numbers.

KIDS COUNT on the Internet

Kids Count in Indiana provides a summary and county profiles in portable document format (PDF) on the Indiana Youth Institute's Web site: www.iyi.org. The Indiana project has compiled information about Hoosier young people from many sources, beginning with 1990 and continuing through the most current year available. These statistics are in the **Kids Count in Indiana** online database on the IYI Web site.

The national *2002 KIDS COUNT Data Book: State Profiles of Child Well-Being* as well as other KIDS COUNT publications are available on the Annie E. Casey Foundation Web site: www.aecf.org.

Most of the state KIDS COUNT projects also have Web sites. Links on the national Web site will take the user directly to a state's site. States vary in the amount of information they distribute via their Web sites.

Abbreviations used in the Kids Count in Indiana data book

SFY – State Fiscal Year – July 1 through June 30
SY – School Year – From the start of the school term in the fall through the end of summer
FFY – Federal Fiscal Year – October 1 through September 30
CY – Calendar Year – January 1 through December 31.

Children and Their Families

Population estimates are used between the census years to estimate the number of people living in a geographic area. As of July 1, 2001, Indiana's population is estimated at 6,114,745, an increase of 34,260 people from Census 2000.[1] Indiana's population grew through the combined effect of births, deaths, and migration into and out of the state. Between April 1, 2000 (when Census 2000 was conducted) and July 1, 2001, Indiana recorded approximately 107,000 births and 69,000 deaths, resulting in a natural increase of 38,000 Hoosiers. This increase was offset by net migration losses of about 3,700 people.

Thirty-six counties experienced declines in population since Census 2000, and fifty-six counties experienced some population gains. The fastest-growing counties include:

- Hamilton County, which grew 8.1%, added 14,737 residents since Census 2000. Hamilton County is now one of the 100 fastest-growing counties in the nation and is currently Indiana's fifth largest county, behind Marion, Lake, Allen, and St. Joseph Counties.
- Hendricks County, growing 6.4% since Census 2000, added 6,691 residents.
- Switzerland County increased by 3.4% since Census 2000, adding 309 residents.
- Johnson County, which grew 3.5% since Census 2000, added 4,031 residents.
- Hancock County increased by 3.2% since Census 2000, adding 1,769 residents.

Counties experiencing the highest downward change in population since Census 2000 include Starke County, which decreased by 1,751 residents, and Rush County, decreasing by 281 residents (Figure 1).[2]

Figure 1. Percent Change in Population, 2000 and 2001: Indiana

Source of Data: U.S. Census Bureau.

Indiana's population is expected to continue growing over the next ten years. The U.S. Census Bureau estimates there will be over 6.3 million Hoosiers in 2010.[3]

The most recent data on Hoosier children come from Census 2000:

- There are 1,574,396 Hoosier children under the age of 18, representing 25.9% of the state's population.
- The number of children increased by 8.1% from 1990, when there were 1,455,964 children under 18.

Families

According to the census, there were 1,602,501 families in Indiana in 2000. The U.S. Census Bureau defines a family or "family household" as "a householder and one or more people living in the same household who are related by birth, marriage, or adoption."

- In 2000, 48% of all families in Indiana included children under the age of 18.
- Among those families with children under 18 in 2000, 72.4% were headed by a married couple, 20.9% were headed by single mothers, and 6.9% were headed by single fathers.
- The percentage of families headed by single parents in Indiana has increased since 1990 when 18% of families with children under age 18 were headed by single mothers and 4.1% were headed by single fathers. In 1990, 77.9% of families with children were headed by a married couple.[4]

Census 2000 was the first to assess the number of grandparents who care for their grandchildren. There are 4.5 million children under age 18 in the United States growing up in grandparent-headed households, representing 6.3% of all children in the U.S. This group of caregivers faces unique challenges. At a time when many older Americans have raised their own children and retired, they are now faced with parenthood again, due to death or illness of the biological parents, divorce, incarceration, parental substance abuse, or child abuse and neglect. While grandparent-headed families cross all socio-economic levels, these grandparents are more likely to live in poverty than other grandparents.[5]

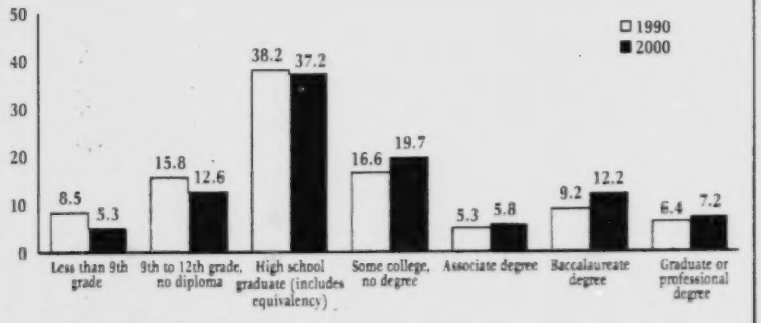
In Indiana, 48,181 grandparents were responsible for raising their grandchildren in 2000.

Marriage and divorce

In 2000, 56.3% of Indiana's population age 15 and over were currently married.[6] Data from the Indiana State Department of Health show that 47,587 marriages were performed in 2000. This number is slightly down from 1999 when 48,373 marriages were performed. Of the marriages performed in 2000, 48.1% were the bride and groom's first marriage, while 11.6% were the bride and groom's second marriage. In 2000, the average age of a first-time bride was 24.6, while the average age of a first-time groom was 26.5. These ages are up from 23.8 for brides and 25.7 for grooms in 1995.[7]

Data from Census 2000 show that 10.9% of Hoosiers age 15 and older were currently divorced, up from 9.5% in 1990.[8] While census data provide an indication of the number of Hoosiers who are divorced during any given year, Indiana does not compile statistical information about divorces. Therefore, it is not known how many divorces are granted to Hoosiers each year or how many of those divorces involve children.

Figure 2. Highest Level of Education Completed by Indiana Residents Age 25 and Above: 1990, 2000



Source of Data: U.S. Census Bureau.

Educational attainment

In 1990, 75.6% of Hoosiers age 25 and older had at least a high school diploma. In 2000, the percentage of Indiana adults with a high school diploma or higher increased to 82.1%, compared with 84% of all Americans. Similarly, the number of Hoosier adults with a baccalaureate degree or higher increased from 15.6% in 1990 to 19.4% in 2000, compared with 26% of all Americans (Figure 2).[9]

Higher education has been linked to higher lifetime earnings. Over an adult's working life (defined as between ages 25-64), high school graduates can expect on average to earn $1.2 million; those with a baccalaureate degree, $2.1 million, and people with a master's degree, $2.5 million. People with doctoral or professional degrees earn $3.4 and $4.4 million respectively.[10]

Families in Need

Poverty

The federal government uses two slightly different statistics to define poverty: thresholds and guidelines. *Poverty thresholds* are the original version of the federal poverty measure and are updated annually by the U.S. Census Bureau. The thresholds are used mainly for statistical purposes such as calculating the number of Americans living in poverty each year.

Poverty guidelines, also updated annually, are published by the Department of Health and Human Services as a simplified version of the poverty thresholds, and are used for administrative purposes to determine financial eligibility for certain federal programs such as Head Start, the Food Stamp Program, and the Children's Health Insurance Program (Table 1).[1]

Table 1. U.S. Poverty Guidelines and Thresholds by Size of Family: 2001, 2002

Size of Family Unit	Poverty Thresholds 2001	Poverty Guidelines 2002	Hourly Wage Needed to Reach Poverty Level in 2002*
1	$9,214	$8,860	$4.43
2	$12,207	$11,940	$5.97
3	$14,255	$15,020	$7.51
4	$17,960	$18,100	$9.05
5	$21,135	$21,180	$10.59
6	$23,664	$24,260	$12.13

* Based on a 2,000 hour work year.

Source of Data: Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation; U.S. Census Bureau.

The Census Bureau also creates a series of Small Area Income and Poverty Estimates (SAIPE) to help the U.S. Department of Education distribute Title I funds. Figures based on 1998 income show an estimated 14.1% of Hoosier children younger than age 18 (compared with 18.9% nationally) to be living in families with incomes below the poverty threshold (Table 2). SAIPE estimates are the most current estimates available that compare U.S. *and* Indiana poverty rates.

Table 2. Estimated Population Living Below the Poverty Level, Indiana and U.S.: 1999

	U.S. Poor % of pop.	Indiana's Poor % of pop.	Indiana's Poor Est. number
SAIPE Estimates, 1998			
Age < 5	20.8	15.4	66,054
Age 5-17	17.5	12.6	137,395
All Ages < 18	18.9	14.1	219,858
All Ages	**12.7**	**10.0**	**588,765**

Source of Data: U.S. Census Bureau 1999, Small Area Income and Poverty Estimates, based on 1998 income, U.S. and Indiana.

The most recent poverty statistics for Indiana come from Census 2000. These figures show that 9.5% of Hoosiers were living in poverty in 1999, lower than that of the U.S. rate of 12.4%.[2] 2000 Census data also indicate that:

- 10.2% of Hoosier families with children younger than age 18 and 13.7% of families with children younger than age five lived in poverty in 1999.
- 30.4% of Hoosier families headed by a single mother with children younger than age 18 and 43.6% of families headed by a single mother with children younger than age five lived in poverty in 1999.

Low-income working families

Although the percentage of Indiana's children living in families with incomes below the poverty level has declined since the early 1990s and remains below the figure for all U.S. children, many Indiana families have moved from poverty into the economic group designated as "low-income working families." These families have household incomes ranging between 100% and 150% of the poverty level (between $18,100 and $27,150 for a family of four in 2002).

- According to the Annie E. Casey Foundation's *2002 KIDS COUNT Data Book*, approximately 180,000 children in Indiana lived in low-income working families in 1999. These families still struggle to make ends meet, despite the fact that at least one parent works year-round.
- Nationwide, 15% of all children lived in low-income working families in 1999 compared with 13% of Hoosier children.[3]

Poverty is closely associated with the percentages of children living in families with income below the poverty line, children in families headed by a single parent, children in families where no parent has full-time, year-round employment, and children living in a household where the household head dropped out of high school. The Annie E. Casey Foundation formed a "Family Risk Index" containing these elements. Nationally, the proportion of children living in "high-risk" families (having three or more of the high-risk characteristics) fell by one percentage point (an 8% change), from 13% to 12% between 1990 and 2000. In Indiana in 2000, the proportion of children with three or more high-risk factors *remained the same as it was in 1990 — 10%.*

Unemployment

In July 2002, the unemployment rate in Indiana was 5.2%, up from 4.1% in July 2001.[4] An estimated 164,705 Hoosiers were unemployed in July 2002, an increase of 27% from a year earlier. Employment trends in Indiana have followed the downturn in the U.S. economy that began in late

2000, but the state's unemployment rate has remained below the national rate of 6.0% through June 2002.

Regionally, Indiana's unemployment rate was the lowest when compared with Illinois (6.6%), Kentucky (5.3%), and Ohio (5.8%).

Wages and income

Governments use several methods for reporting income: per capita income, median household income, and median family income. *Per capita income* reflects the total personal income of the residents of the state divided by the total number of residents in the state. *Median household income* includes the income of all persons (related and unrelated) in the household over the age of 15. *Median family income* includes the income of all related persons in the family (Table 3).

Table 3. Income Comparisons, Indiana and U.S.: 2000

	Indiana	United States
Per Capita Income*	$26,933	$29,469
Median Household Income**	$41,567	$41,443
Median Family Income**	$50,261	$49,900
Median Earnings: Male Full-time Worker**	$37,056	$37,057
Median Earnings: Female Full-time Worker**	$25,252	$27,194

* U.S. Department of Commerce, Bureau of Economic Analysis.
** U.S. Census Bureau.

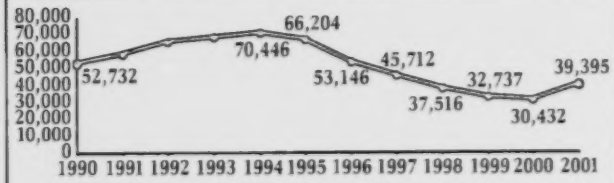
Programs to assist poor families

The federal program Temporary Assistance for Needy Families (TANF) replaced AFDC (Aid to Families with Dependent Children) in 1997. The TANF program provides cash assistance and services to families with children younger than age 18 who are deprived of financial support by a parent due to death, absence from the home, unemployment, or physical or mental incapacity.

Although the TANF Block Grant provides funding for various social services and benefits to low-income families, cash assistance is the primary program funded through the block grant.

- In SFY 2001, a monthly average of 39,395 *families* received TANF benefits, compared with 30,432 families in SFY 2000 (Figure 1).

Figure 1. Monthly Average Number of Families Receiving AFDC/TANF, Indiana: SFYs 1990-2001



Source of Data: Indiana Department of Public Welfare, Annual Reports, FYs 1990, 1991; Indiana Family and Social Services Administration, Division of Family and Children, Annual Report, FY 1992; Indiana Family and Social Services Administration, Division of Family and Children, Demographic Trend Reports, FYs 1993-1995; Indiana Family andSocial Services Administration, Division of Family and Children, Demographic Trend Reports, SFYs 1996-2001.

- The average monthly number of TANF *recipients* in SFY 2001 was 108,382, or 1.8% of Indiana's population, compared with 76,602, or 1.3% of Indiana's population in SFY 2000. The average monthly number of TANF recipients from SFY 2000 to SFY 2001 represents a 41.5% increase.

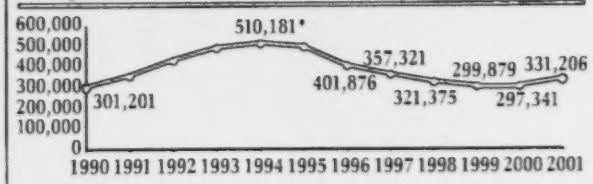
- The total value of TANF benefits paid in SFY 2001 was $108.6 million, up from $80.6 million in SFY 2000 and $87.3 million in SFY 1999.[5]

The federal Food Stamp Program is designed to raise the nutritional level of low-income households by supplementing their available food-purchasing dollars with food stamp coupons. Although federally funded, the program is administered through each state. In order to qualify for food stamp benefits, applicants must meet both financial and non-financial requirements. Financial criteria include income and asset limits, while non-financial criteria include state residency, citizenship/alien status, work registration, and cooperation with the Indiana Manpower and Comprehensive Training Program (IMPACT), which emphasizes job placement and retention complemented by education and training services. Eligible participants then receive food coupon benefits based on family size.

- In SFY 2001, a monthly average of 331,206 Hoosiers (5.9% of Indiana's population) received nutritional assistance through the food stamp program, up 11.4% since SFY 2000 (Figure 2).

- The total value of food stamps issued in SFY 2001 was $297.9 million, up from $261.8 million in SFY 2000, a 13.8% increase.[6]

Figure 2. Monthly Average of Persons Issued Food Stamps, Indiana: SFYs 1990-2001



*Data provided for 1994 represents the monthly average number of persons CERTIFIED to receive food stamps.

Welfare reform

In 1995, Indiana launched a statewide overhaul of its main cash welfare program, then called Aid to Families with Dependent Children (AFDC). The "Work First" approach was adopted and designed to increase families' economic self-sufficiency by decreasing reliance on welfare, increase employment by making it more financially rewarding than welfare, develop working partnerships with businesses and local government, and encourage responsible parenting behaviors.

In 1996, major federal welfare legislation – the Personal Responsibility and Work Opportunities Act (PRWORA) – was signed into law. PRWORA replaced the AFDC cash assistance program nationally with a single block grant called the Temporary Assistance for Needy Families (TANF). Indiana's new welfare reform policies already in effect at that time—work requirements and incentives, time limits (Indiana currently has a lifetime limit of 24 months for families, though benefits can continue to children), and personal responsibility rules—already closely conformed to the new federal welfare provisions.

Indiana began evaluating the state's welfare reform in 1995 when the Family and Social Services Administration (FSSA) hired Abt Associates, Inc. (in partnership with the Urban Institute and Indiana University) to conduct an ongoing study of the implementation, cost-effectiveness, and impact of the new policies and programs. The Indiana study randomly assigned families to two groups: the "welfare reform group" which received assistance under reform policies, and a "traditional welfare group" which continued to receive assistance under the old rules of AFDC. In 1997, the U.S. Department of Health and Human Services began a broader assessment of the effectiveness of the federal welfare reforms of Indiana and four other states – Connecticut, Florida, Iowa and Minnesota. Findings of this study include:[7]

- Indiana's welfare caseload dropped from 142,604 in August 1996 to 126,965 in September 2001. During the first ten months of 2001, the number of Hoosiers receiving TANF benefits increased by more than 15%.[8]
- Between 1995 and 2000, most people who left welfare in Indiana began working. However, many took jobs that were part-time or lasted only a few months. Results of a five-year follow-up survey found that 89% of the reform group and 87% of the traditional group had worked since the new state program was instituted in 1995. Among those who received cash assistance under welfare reform policies, 52% had worked at jobs that ended within six months. Only 55% were currently working when surveyed in year five, and among those in the reform group who were working, only 68% were working full-time—the same proportion of the traditional group working full-time.[9]
- Many families who moved from welfare to work in Indiana remained poor because they earned low wages. Welfare reform recipients who worked earned, on average, $7.06 per hour, or $12,355 per year. Among the AFDC group, the hourly wage was $9.94, and annual income was $17,395.[10]
- Health problems, childcare, and lack of education prevent some welfare recipients from working and make it harder for others to remain employed. Among those welfare reform clients who worked in 1997, 36% said their job performance was hindered by health problems, 46% felt childcare issues prevented them from retaining a job, and 37% said lack of transportation presented problems for continuing to work.[11]
- Many families continue to rely on food stamps, Medicaid, and other forms of government assistance to make ends meet. Both former and current welfare recipients reported needing additional help from family and/or community organizations to make ends meet (Table 4).

Table 4. Use of Government Programs by Current and Former TANF Recipients, Indiana: 1997

	Percent Receiving Benefits	
	On TANF	Off TANF
Food Stamps	95%	38%
Medicaid	97%	53%
Social Security	12%	11%

Source of Data: Fein, D. The Indiana Welfare Reform Evaluation: Who is On and Who is Off? Comparing Characteristics and Outcomes for Current and Former TANF Recipients, September 1997.

- Despite the hardships that many welfare-leavers experience, many have favorable views of welfare reform. Responding to the two-year follow-up study, 44% of former welfare recipients said welfare reform "helped me to find a job" and 45% said it "helped me to feel like I could succeed on my own."[12]

At both the federal and state levels, changes in welfare policy were aimed primarily at changing the behaviors of adult recipients. Although the expected outcomes of reform on children were

unspecified, there was hope that better family environments—improved economic and psychological well-being—would produce more positive outcomes for children and adolescents. The program increased rates of employment and decreased respondents' use of TANF and food stamps. However, it did not affect total household income, had few effects on material hardship, and had no impacts on family structure.[12]

There were few statistically significant differences in outcomes for children in the reform and traditional groups. Education outcomes, including school performance, engagement in school, grade repetition, assignment to special education, and school attendance were nearly identical in the two groups of children ages 5-12 at the time of the study.

As noted earlier, most families in both groups remained poor or low-income and experienced numerous disadvantages related to socioeconomic status. Adolescents in both groups in the study experienced difficulties both in and out of school. Among adolescents ages 13-17 at the time of the study, the only statistically significant difference was in school performance: adolescent students in the traditional group were more likely to be reported as "doing well" than in the reform group. Although the differences were not statistically noteworthy, adolescents in the reform group were slightly more likely to have dropped out of school and been involved with the police than were adolescents in the traditional group.

Although the study found a lack of clear positive effects on children five years after welfare reform was implemented in Indiana, adolescents in both groups showed more difficulties than did younger children, but most differences could not be attributed to welfare reform. The report concludes: "Improving these families' situations will take a broader effort than welfare reform and time."[14]

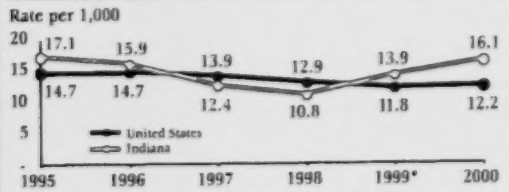
Child Abuse and Neglect

Children should live in an environment free and safe from abuse, neglect, and violence. They should have access to basic needs such as food and housing. Perhaps most importantly, they should have the love of their caregivers and other adults in their lives. However, for too many children, this environment does not exist. In 2000, the most recent year for which national data are available, approximately five million children were the subjects of nearly three million investigations for maltreatment. Of those investigations, 879,000 children were found to live in environments in which maltreatment was substantiated. National rates of substantiated maltreatment have continued to decline steadily since 1993, when the rate reached 15.3 per thousand children younger than age 18, and in 1999 when the rate was 11.8 per thousand children younger than age 18 (Figure 1). In 2000, the national rate crept up to 12.2 per thousand children younger than age 18.[1] Additional data will need to be collected to determine if this rate will continue to increase.

Figure 1. Rates of Child Abuse and Neglect, Indiana and United States: 1995-2000



Source of Data: Child Maltreatment Reports, 1995-2000, Indiana Family and Social Services Administration, Division of Family and Children, Annual Reports SFYs 1995-2000.
*In 1999, a new computer system was installed at the DFC county offices.

The picture of child abuse and neglect in Indiana is less clear. After falling from a high of 69,458 reported cases of maltreatment in SFY 1995 to 42,979 reported cases in SFY 2000, maltreatment cases in SFY 2001 rose to 63,032, representing a 46.7% increase in the total number of reported maltreatment cases from SFY 2000 (Table 1).[2] The increase in the number of maltreatment cases may be explained by a new reporting procedure instituted at the Family Social Services Administration (FSSA). The state is now saving unsubstantiated reports, including reports that were expunged from the system. Per state statute, unsubstantiated cases were expunged from the system after 180 days. Prior to SFY 2001, only cases currently in the system were included in the count. The new data collection procedure will give the state a more accurate picture of the total number of substantiated and unsubstantiated reports in its fiscal year.

Table 1. Substantiated Cases of Child Abuse and Neglect, Indiana: SFYs 1990-2001

	State Fiscal Year

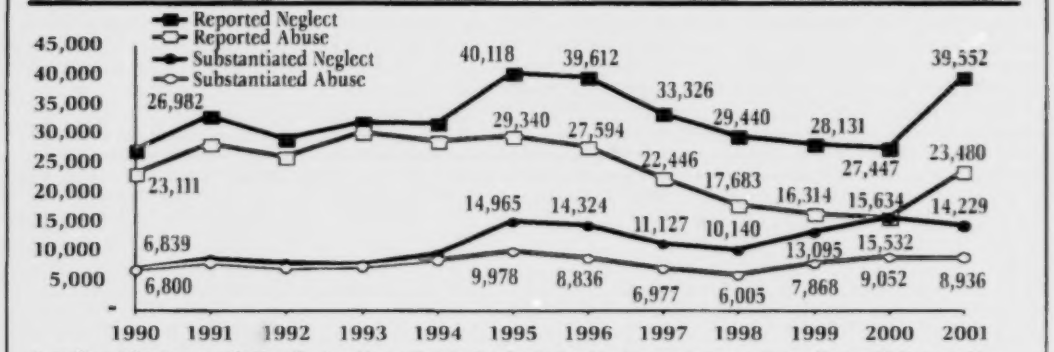
*In early 1995, the indicated category of maltreatment was eliminated. This table recalculates abuse and neglect rates for substantiated cases only, for all years.
Source of Data: Indiana Department of Public Welfare, Annual Reports, FYs 1990, 1991; Indiana Family and Social Services Administration, Division of Family and Children, Annual Report, FY 1992; Indiana Family and Social Services Administration, Division of Family and Children, Demographic Trend Reports, FYs 1993-1995; Indiana Family and Social Services Administration, Division of Family and Children, Demographic Trend Reports, SFYs 1996-2001.

In SFY 1995, Indiana made changes to its child welfare system that resulted in a marked increase in the number of reported cases of maltreatment. Cases were classified as "substantiated" or "unsubstantiated," and the category of "indicated" was eliminated. The state also hired more caseworkers and strengthened their training. As a result of these changes, the rate of substantiated cases increased markedly from 12.1 per 1,000 children in SFY 1994 to 17.1 per 1,000 in SFY 1995.

The rates continued to decline until SFY 1999; however, the nature of the declining rates remains somewhat vague. We can speculate it may have been due to the installation of a new computer system at the county offices of the Division of Family and Children (DFC). During the transition, workers perhaps needed to direct their attention toward extra training for the new system. Data recording stabilized in SFY 1999, when the rate increased to 13.9 per 1,000 children. In SFY 2000, the rate rose again to 16.1 per 1,000 children younger than age 18. In SFY 2001, the rate decreased slightly to 14.7, but the number of *reports* rose significantly and the substantiated cases fell slightly (Figure 2).[3]

Figure 2. Reported and Substantiated Cases of Noninstitutional Child Abuse and Neglect, Indiana: SFYs 1990-2001



Source of Data: Indiana Department of Public Welfare, Annual Reports, FYs 1990, 1991; Indiana Family and Social Services Administration, Division of Family and Children, Annual Report, FY 1992; Indiana Family and Social Services Administration, Division of Family and Children, Demographic Trend Reports, FYs 1993-1995; Indiana Family and Social Services Administration, Division of Family and Children, Demographic Trend Reports, SFYs 1996-2001.

- Of the 23,480 reports of abuse, 8,936 (38.1%) were substantiated. Suspected sexual abuse was reported for 10,434 children; 4,763 (46%) cases were substantiated. Suspected physical abuse was reported for 13,046 children; 4,173 (32%) cases were substantiated. Abuse cases were substantiated 38% of the time, and neglect cases were substantiated 36% of the time—a significant decrease compared with substantiations in SFY 2000, when 58% of both types of abuse were substantiated.
- There were 39,552 reports of suspected neglect in SFY 2001; of these, 14,229—36%—were substantiated, also a significant decrease over the percentage of 57% substantiations in SFY 2000.
- Maltreatment of children varies by age. Nearly 15% of physical abuse victims were younger than age four; 15% were ages 4-6; 36% ages 7-12, and 28% were ages 13-17. Of the sexual abuse victims, just below 5% were younger than age four; 15% ages 4-6; and 33% were ages 7-12, while nearly 40% were ages 13-17. Of the neglect victims, 33% were younger than age four; more than 18% were ages 4-6; more than 30% were ages 7-12 and 15%, ages 13-17. (Figures do not total 100% because of rounding and the numbers of victims whose ages were not recorded.)
- 77% of the victims of maltreatment were white; 18% were African-American; one percent was Native American, Asian/Pacific Islanders were less than one percent each, and 2% were multi-racial. Hispanic children may be of any race, and they are included in the previous percentages. There were 1,083 Hispanic victims of maltreatment—just over 4% of the total number of victims.
- Of substantiated cases, boys were slightly more likely than girls (52% vs. 47%) to be physically abused, while victims of sexual abuse remain overwhelmingly girls (76% vs. 24%). Both genders were equally likely to be victims of neglect.
- Of substantiated cases, most physical abuse (64%) and neglect (84%) were perpetrated by the victim's natural parent(s). Children were more likely to be sexually abused by an unrelated individual (51%) or a relative other than a parent or grandparent (12%).

Institutional maltreatment

Institutional abuse and neglect is that which takes place when a child is in an out-of-home setting such as a school, child care center, home or ministry, state institution, or foster home responsible for his or her well-being.

- There were 298 children with substantiated institutional abuse in SFY 2001; of these, 192 (64%) were sexually abused, and 106 (36%) physically abused. Of the 126 substantiated cases of sexual abuse that took place in residential facilities, 88 (70%) were perpetrated by another resident, while 38 (31%) *were perpetrated by a staff member.*

Fatalities

Fatalities from abuse and neglect rose to 45 in SFY 2001, up from 44 who died in SFY 2000, but fewer than the all-time high of 65 children who died in SFY 1998. Of the 45 children who died of maltreatment in SFY 2001, 26 (58%) died from abuse and 19 (42%) died from neglect.

Of the 26 abuse victims, six died at the hands of their natural mothers, and 13 were killed by their natural fathers. Of the 19 victims of neglect, the child's mother was found responsible in 11 deaths, and the child's father in one death. In 2000, approximately 1,200 children died of abuse or neglect in the United States.[4]

Programs to help prevent maltreatment

The high emotional cost of abuse and neglect often takes its toll on the child who experiences maltreatment. Children who suffer from abuse and neglect may have long-term effects on their well-being, such as problems with attachment, low self-esteem, increased dependency, and anger.[5]

Prevent Child Abuse America commissioned a report in 2001 to statistically document the nationwide cost of child abuse and neglect. Data was drawn from the Department of Health and Human Services, the Department of Justice, and the U.S. Census Bureau. Costs were divided in two categories. *Direct costs* are those associated with the immediate needs of abused and neglected children, such as hospitalization, the mental health care system, child welfare system, law enforcement, and the judicial system. Indirect costs are those costs associated with long-term or secondary effects of abuse and neglect, such as special education, mental health care, juvenile delinquency, and adult criminality. According to the report, *the total annual cost of child abuse and neglect in the United States is estimated at $94 billion dollars.*[6]

Indiana has two major initiatives aimed at preventing child maltreatment, Healthy Families Indiana and the Children's Trust Fund. Healthy Families Indiana (HFI) is a voluntary program that serves families in all 92 counties whose children may be at risk for abuse and neglect. The program is designed to strengthen families by reducing child abuse and neglect, childhood health problems and juvenile delinquency, and teaching positive parenting skills. By working closely with hospital maternity wards, prenatal clinics and other local agencies, HFI systematically identifies families that could benefit from education and support services either before or immediately after birth. HFI is a collaborative project of the Indiana State Department of Health, the Criminal Justice Institute, the Division of Mental Health, the Division of Family and Children, Prevent Child Abuse-Indiana, and numerous other community-based organizations.

- In FFY 2001, 13,259 families received home visiting services through HFI.

The Children's Trust Fund (CTF) was established in 1994 to support community-based programs that seek to reduce child abuse and neglect through community education and/or by providing services to a targeted group of people who may be at risk for abusing and/or neglecting their children. Sales from the "Kids First" license plates are used to support a large number of prevention programs. The CTF has allocated more than $12 million since it began granting funds in 1995.

- In SFY 2003, CTF provided 86 community-based programs with $2.5 million in support.

With the increasing number of other special license plates available to Hoosier motorists, the CTF continues to experience a decrease in revenues from sales each year.

Healthcare for Young Hoosiers

Hoosier Healthwise

In 1997, Congress passed the Children's Health Insurance Program (CHIP) as part of the federal Balanced Budget Act to encourage states to provide health insurance to uninsured children. At the time, an estimated 15% of all children in the U.S. and 12.4% of Hoosier children were uninsured. The Indiana General Assembly responded by replacing Medicaid with the Hoosier Healthwise program for low-income pregnant women and children. Hoosier Healthwise provides coverage for children younger than age 19 living in households with income below 150% of the federal poverty guideline (currently $27,150 for a family of four). In January 2000, families with incomes of 150% to 200% of the federal poverty guideline (currently up to $36,200 for a family of four) could also receive coverage by paying a small monthly premium. The plan covers routine checkups, well-child visits, doctor visits, hospital stays and specialty care, prescription drugs, mental health, vision and dental care, screenings, immunizations, and diagnoses and treatments.

Since the program went into effect in July 1998, Indiana has been highly successful in enrolling pregnant women and children in Hoosier Healthwise. Outreach has been accomplished in cooperation with a network of 560 enrollment centers throughout Indiana—including schools, township trustees, community action programs, WIC centers, local departments of health and health clinics, community-based agencies and organizations, as well as the 92 local offices of the Division of Family and Children.[1]

- By June 2002, 433,141 children and adolescents had been enrolled in Hoosier Healthwise. Total enrollment has more than doubled since May 1998 (the last time persons could enroll under the "old" Medicaid program).
- The number of Primary Medical Providers working with Hoosier Healthwise has increased during the past year from 2,080 to 2,152 in all 92 counties. Additionally, more than 1,400 dentists participate in the program.

Prenatal care

Expectant mothers can give their unborn children a head start in life by receiving early and adequate prenatal care. The percentage of Hoosier mothers beginning prenatal care in the first trimester in 2000 (79.4%)[2] remained relatively unchanged from 1999 (79.5%), but still lags behind the national rate of 83.2%.[3] The percentages of women beginning care in the first trimester also vary by age and race/ethnicity (Table 1).

Table 1. Prenatal Care in the First Trimester by Age and Race/Ethnicity of Mother, Indiana: 2000

	Percentage of Infants Born to Mothers Who Received 1st Trimester Care					
Age of Mother	Total	White	African-American	AI/E/A*	Asian/PI	Hispanic**
10-14	41.7	45.8	34.0	–	–	27.3

Drinking alcohol during pregnancy

Recent studies of the impact of alcohol on unborn children have concluded that there is *no safe limit* for alcohol consumption. The risk of fetal alcohol syndrome and fetal alcohol effects are well-known. There are more subtle behavioral consequences of prenatal alcohol exposure, however, that show up later in childhood. Children of mothers who drank—even in amounts as small as one drink per week—during pregnancy were found to be more likely to have attention and other cognitive problems, mental health problems such as anxiety or withdrawal, and behavior problems such as aggression and delinquency. The severity of the problems was related to the magnitude of prenatal alcohol exposure.

Few Hoosier women reported using alcohol during pregnancy in 2000: 0.7% in 2000 (down from 0.8% in 1999 and 0.9% in 1998). While the rate appears to be declining, it may represent an undercount, since women have been found prone to supply inaccurate information about use of substances known to affect pregnancy outcomes.[4]

Smoking during pregnancy

More than one in five (20.2%) Hoosier women who gave birth in 2000 reported smoking during pregnancy. This figure represents a slight decline from the rate of 20.9% in 1999. However, pregnant Hoosier women of whatever age, *were much more likely to smoke than pregnant women nationally—20.2% vs. 12.2% in 2000.*[5] Women who smoke during pregnancy are 1.3 times more likely to give birth to a preterm baby (one born before 37 weeks gestational age) and more than

twice as likely to have a low birthweight baby. Among all mothers who reported smoking during pregnancy in 2000, close to one-fourth smoked 20 or more cigarettes per day.[6]

Although the smoking rate for all pregnant women declined in 2000, there was no change in the direction of a disturbing trend first noted five years earlier: an increase in smoking among teen-aged mothers (Table 2).

Table 2. Smoking During Pregnancy by Age and Race/Ethnicity of Mother, Indiana: 2000

Births to Mothers Who Reported Smoking

Age of Mother	All Races Number	%	White Number	%	African-American Number	%	AI/E/A* %	Asian/PI %	Hispanic** %
10-14	19	15.0	17	23.6	2	3.8	N/A	N/A	0
15-17	895	26.7	817	31.6	68	9.4	36.4	14.3	9.8

*American Indian/Eskimo/Aleut.
**Hispanics may be of any race. Hispanics are included in racial totals.
Source of Data: Indiana State Department of Health, Data Analysis Team.

- Indiana women of all ages in different race/ethnic groups had great variation in reported smoking rates: 21.1% of white women; 15.2% of African-American women; 4.1% of Asian/Pacific Island and 5.1% of Hispanic women. American Indian/Eskimo/Aleut women reported the highest rate of all at 22.4%, still down considerably from 1999, when the rate reached 32.7%.

Low birthweight

Infants who weigh in to life at less than 2,500 grams (5 lb., 5 oz.) are defined as having low birthweight (LBW); infants weighing less than 1,500 grams (3 lb., 5 oz.) are considered to be at very low birthweight (VLBW). An infant may have a birthweight that is low for gestational age or low because of premature birth (i.e., less than 37 completed weeks of gestation). The lower the birthweight, the greater the probability an infant will have neurological and health problems, developmental delays, attention and learning disorders, and behavioral problems.

Below normal birthweight is associated with environmental toxins, the age and race/ethnicity of the mother, her general physical health and nutritional status, oral health, adequacy of prenatal care, maternal behaviors such as drug, alcohol, and tobacco use, multiple births and the spacing of births, and maternal infections such as sexually transmitted diseases.

- Nationally, the percentage of babies born at low birthweight increased steadily from the mid-1980s (6.8%) to 7.6% in 1998. Since that time, the rate has remained consistent. In Indiana, the percentage of LBW babies decreased in 2000, to 7.3%, down from 7.8% in 1999.
- In 2000, 1.4% of babies born in the United States and Indiana were VLBW.

In Indiana in 2000, infant birthweight continued to vary by the age and race/ethnicity of the mother. The younger the mother, the greater the likelihood her child would weigh less than 5 lb., 5 oz. While low-birthweight rates among African-American infants born to women of all ages were well above that of any other race/ethnic group, this was particularly true for infants born to teen mothers.

Starting life

The number of infants born yearly in Indiana has continued to rise since 1995, to 87,697 in 2000. However, births to women younger than age 20 have declined again, continuing the trend begun in 1996.

- There were 10,968 births to Hoosier women younger than age 20 in 2000—representing 12.5% of all births.
- In 2000, the birthrate among Hoosier women ages 15-19 reached an all-time low of 49.1 births per 1,000 females in the age group, down from 64.1 per thousand in 1995.
- The teen birthrate (ages 15-19) in the United States also reached an all-time low in 2000—48.5 per 1,000 live births.[7]

Nationally, the decline in teen births began in 1991 when the rate was 62.3 per 1,000. Between 1990 and 1994, Indiana's teen birthrate was below that of the nation; in 1995 the rate jumped and has remained above the national rate since.

- 127 infants were born to 10-14 year-old Hoosier mothers in 2000; 3,357 to mothers ages 15-17; and 7,484 to mothers ages 18-19.
- The 2000 birthrate for Hoosier 10-14 year-olds declined slightly from 1999, from 0.8 per thousand to 0.6 per thousand. More encouraging is the continuing drop in the birthrates for 15-17 year-olds—from 27.4 per 1,000 in 1999 to 26.2 per thousand in 2000, and for 18 and 19 year-olds—from 86.3 per thousand to 80.8 per thousand in 2000 (Table 3).

Table 3. Reported Pregnancies, Fetal Deaths, Abortions, and Live Births by Age of Mother, Indiana: 2000

Age of Mother	Pregnancies		Fetal Deaths	Abortions		Live Births	
	Number	Rate (per 1,000 women in age group)	Number	Number	As a % of pregnancies	Number	Rate (per 1,000 women in age group)
10-14	214	1.0	0	87	40.7	127	0.6
15-17	4,101	32.0	37	707	17.2	3,357	26.2
18-19	8,938	96.5	60	1,394	15.6	7,484	80.8
15-19	13,039	59.1	97	2,101	16.1	10,841	49.1
All Ages	**100,060**	**75.6**	**596**	**11,767**	**11.8**	**87,697**	**49.8**

Source of Data: Indiana State Department of Health, Data Analysis Team

Rates of reported pregnancies are calculated the same way as age-specific birthrates—the number of occurrences per 1,000 women in the age group. Reported adolescent pregnancy rates are higher than birthrates, but are also declining both in numbers and as rates. The pregnancy rate among Hoosier teens ages 15-19 was 59.1 per 1,000 young women in 2000, compared with a reported rate of 62.1 per 1,000 in 1999. Fetal deaths and abortions performed in Indiana are the source of the difference between numbers of pregnancies and live births (Table 3).

In Indiana, 11,767 abortions were performed for Hoosier women in 2000—2,188 for women younger than age 20. The younger the mother, the more likely her pregnancy resulted in termination. Women under 20 reported 13% of the pregnancies and 19% of the abortions. Teen pregnancies do not account for a majority of abortions performed (Table 3).

Non-marital births

One in three (34.6%) births in Indiana were non-marital—above the figure for the U.S. as a whole (33.2%). The percentages differ by the age and race/ethnicity of the mother. The younger the mother, the less likely she was to be married; 99.2% of all births to 10-14 year-olds were non-marital. Among 18-19 year-olds, 77.4% of all births were non-marital in 2000, similar to the 1999 figure of 77.5% of all births. The proportion of non-marital births to women of all ages was much higher for African-American women—76.0%—than for any other racial/ethnic group (Table 4).

Table 4. Percent of Births to Unmarried Women by Age Group and Race/Ethnicity, Indiana and U.S.: 2000

Age of Mother	Non-Marital Births as a % of All Births in these Age Groups						
	U.S. Total	Indiana Total	Indiana White	Indiana African-American	Indiana AI/E/A*	Indiana Asian/PI	Indiana Hispanic**

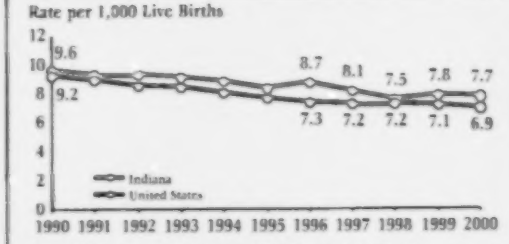
Infant and child deaths

One of the great achievements of the twentieth century was the reduction in infant and child deaths. Still, as we begin this next century, an excessive number of children die too young—some from readily preventable deaths, others from congenital conditions, or from diseases for which preventative measures or cures have not yet been found.

Figure 1. Infant Mortality, Indiana and U.S.: 1990-2000



Source of Data: Indiana State Department of Health, Data Analysis Team

In 2000, the infant mortality (death before a child's first birthday) rate in Indiana declined slightly from 7.8 per 1,000 live-born infants in 1999 to 7.7 deaths in 2000. Still, 676 Hoosier infants did not reach their first birthdays in 2000.

The national rate of infant mortality fell to 6.9 deaths per 1,000 live-born infants, down from 7.2 in 1999. The mortality rate among Hoosier infants has been consistently higher than the U.S. rate throughout the past decade (Figure 1).

- Infant mortality in Indiana differs markedly by race. Among white infants, the mortality rate was 6.7 per thousand live births, while among African-American infants, the rate was 15.9—more than double for white infants.

Leading causes of death for Hoosier children ages 1-14 in 2000 were: non-vehicular accidents, motor vehicle crashes, cancer, congenital anomalies, and homicide. Deaths among children ages 1-14 in Indiana fell to 25 per 100,000 children, down from 28 deaths per 100,000 children in 1999. The national rate remains lower, at 24 deaths per 100,000 children ages 1-14.

K-12 Education

K-12 enrollment

During the 2000-01 school year (SY), there were 988,691 students enrolled in grades pre-K through 12 in Indiana's public schools, a 15% increase since SY 1994-95.[1] During the same period, non-public school enrollment in grades K-12 grew by 11%, to 119,069.[2] The number of students enrolled in alternative education programs has increased markedly since SY 1994-95 when there were fewer than 1,500 students enrolled. Legislation passed by the Indiana General Assembly in 1997 provided funding to encourage school corporations to offer alternative education to their students.[3]

Alternative education programs are targeted toward youth in grades 6-12. Students become eligible for alternative public education if they have withdrawn from school or intend to do so; do not comply academically and would benefit from a different type of instruction; are parents or expectant parents; are employed and their wages are necessary for their own support or the support of their families; or are "disruptive" students whose own behavior affects their learning in regular classrooms. Available options for these students include more individualized instruction using alternative teaching and learning methods until they can either return to regular classrooms or graduate from high school. During the 2000-01 school year, alternative education programs served 31,410 students in 259 school corporations.[4] Additionally, nearly 20% of students enrolled in these programs withdrew prior to completion, up from 13% the previous year.

For many Hoosier families, home schooling continues to be an increasingly popular option. In Indiana, participation of home-schooled students in public school classes and extracurricular activities may take place with the permission of the school superintendent. The growth in the number of Indiana children who are home-schooled has been most dramatic. In 1995, 3,185 students were registered with the Indiana Department of Education as home-schooled. During SY 2000-01, that number increased to 21,939, *an increase of nearly 589%* (Table 1) in six years.[5]

Table 1. Enrollment in Grades K-12 by Type of School, Indiana: SYs 1994-95, 2000-01

Type of School	School Year 1994-1995	School Year 2000-2001	% Change between SYs 1994-95 and 2000-01
Public schools*	968,357	988,991	2.1
Non-public schools	107,197	119,069	11.1
Alternative schools	1,328	31,410	2265.2
Home schools	3,185	21,939	588.8

ISTEP+ and Graduation Qualifying Examination (GQE)

In December 2001, the Indiana Department of Education reported that statewide scores on the ISTEP+ examination for Fall 2001 were very similar to those of the previous year for students in grades 3, 6, 8, and 10.

ISTEP+ Scores in Grades 3, 6, and 8

- 57% of 3rd graders passed both parts of the ISTEP+ in Fall 2001, an increase of one percentage point from 2000.
- 46% percent of 6th graders passed both parts of the ISTEP+ in Fall 2001, the same as in 2000.
- 58% of 8th graders passed both parts of the ISTEP+ in Fall 2001, an increase of two percentage points from 2000.

Table 2. Percent of 3rd, 6th, and 8th Graders who Passed the Math and Language Standards of the ISTEP+

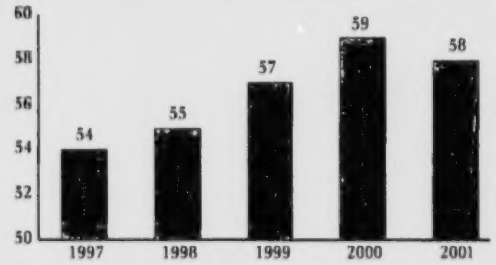
	2000 Math	2000 Language	2001 Math	2001 Language
3rd Graders	70	63	70	66
6th Graders	62	52	61	52
8th Graders	64	68	66	68

Source of Data: Indiana Department of Education

Passing both the English/language arts and mathematics parts of the grade 10 ISTEP+ test is a prerequisite for high school graduation. Students have five additional opportunities to retake this Graduation Qualifying Exam (which tests proficiency at the 9th-grade level) in order to receive a diploma. The law also provides for limited appeals and waivers. The GQE results in Fall 2001 for 10th graders in the Class of 2004 showed slight decreases in language proficiency, but increases in math proficiency scores.[6]

- 58% of 10th graders passed both parts of the GQE in Fall 2001, down one percentage point from the passing rate for those in the Class of 2003 taking the test for the first time. (Figure 1).

Figure 1. Percent of 10th Graders who Passed Both Sections of the Graduation Qualifying Exam, Indiana: 1997-2001



Source of Data: Indiana Department of Education

- 68% of 10th graders passed the GQE Language Standard, down one percentage point from the 10th grade passing rate in Fall 2000.
- 65% of 10th graders passed the GQE Math Standard, down two percentage points from the 10th grade passing rate in Fall 2000.

High school graduation

To calculate the graduation rate, the Indiana Department of Education uses methodology employing an "odds ratio" that a 9th grade student will graduate from high school four years later.

- The Indiana Department of Education reports a preliminary graduation rate of 89.3% for the Class of 2001, relatively unchanged from the Class of 2000 rate of 89.5%.

A simpler estimate of student progression through the state's public high schools is obtained by dividing the number of graduates by the number of students who were enrolled in grade 9 four years earlier. The state and county data pages provide these figures as the "percent of freshman class graduating in four years." This measure has been calculated by IYI. It does not calculate student transfers in and out of the state or county, students transferring in and out of private or home schools, incarcerated students, deaths, or those who graduated in less than four years, earned a GED, or entered college without a high school diploma.

- The number of public school graduates in SY 2000-2001 represents 70.9% of the number of students enrolled as freshmen in SY 1997-1998.

College entrance examinations

Most college-bound students take standardized entrance examinations. Although some schools have stopped requiring test scores, a majority of colleges and universities continue to consider the test scores of applicants when making decisions on admission and scholarship, academic advising, and course placement.

The two most widely used entrance examinations are the SAT, first given in 1941, and the ACT, first given in 1959. The SAT has two parts, verbal and mathematics, each of which has a perfect score of 800. Scores on the two portions of the test are summed to yield a maximum composite score of 1,600.

- In 2001-2002, more than 46% of the nation's high school graduates—1,327,831—took the SAT, achieving on average a combined score of 1,020—504 for the verbal test and 516 for the math test.
- 42,126 Hoosier students from the class of 2002 (62% of the graduating class) took the SAT for an average combined score of 1,001—498 for the verbal test and 503 for the math test.

The College Board, which administers the SAT, has announced the development of a new test, the SAT 1. The new test will be closely aligned with current high school curricula, and will contain: a writing test, including a student-written essay; more critical reading passages which will take the place of analogies; and an expanded math portion to include topics from Algebra II.

The ACT is scored on a scale of 1 to 36. The composite score is based on subscores in four academic areas: English, reading, mathematics, and science reasoning.

- The national average composite score on the ACT, taken by more than 1.1 million students in the graduating class of 2002, was 20.8.
- 12,463 Hoosier students took the ACT in 2002 for a composite score of 21.5.

Charter Schools

In 2001, the Indiana legislature passed Public Law 100-2001, sec. 21, enabling the creation of public charter schools—one of 38 states to do so in the past ten years. A charter school is a public school that is nonsectarian and nonreligious, and operates under a written contract between an organizer and a sponsor. The organizer must be a non-profit group or an entity and a sponsor must be one of the following: (a) a governing body; (b) a state educational institution that offers a four-year baccalaureate degree; or, (c) the executive of a consolidated city.[7] Hoosier children will begin attending the state's first 13 charter schools in Fall 2002 (Table 3).

No Child Left Behind Act of 2001 (Public Law 107-110)

In January 2002, the No Child Left Behind (NCLB) Act was passed by Congress and signed into law. Implementation of this new law will change the federal government's role in K-12 education by requiring each state to create stronger accountability standards and more rigorous assessments of progress toward meeting their standards. The success of American public schools will be judged in terms of their students' accomplishments. The Act, which also seeks to reduce the achievement gap between well-off and lower-income students and between minority and non-minority students, is based on four comprehensive reform principles:[8]

Stronger Accountability for Results. Each state must create challenging statewide academic standards and proficiency goals for what every child should learn and know in reading, math, and science. Beginning in the 2002-2003 school year, schools must administer tests in each of three grade-spans: grades 3-5, grades 6-9, and grades 10-12. Beginning in the 2005-2006 school year, tests must be administered every year in grades 3-8. By the 2007-2008 school year, science achievement must also be tested.

Increased Flexibility and Local Control. The new law gives states and local school corporations more flexibility in using the four streams of federal education dollars they receive each year: Teacher Quality State Grants; Educational Technology Grants; Innovative Programs, and Safe and Drug-Free Schools funds. The NCLB Act also consolidates several funding streams, simplifying the application process.

Expanded Options for Parents. The NCLB Act will offer parents of a child enrolled in a school failing to meet a state's standards the opportunity to transfer the child to a better-performing school. In addition, federal education funds will be available for "supplemental education services" such as tutoring and after school services for parents with students in failing schools. Congress has supported the 21st Century Community Learning Centers (CCLCs) program, and appropriated $1 billion in FFY 2002, up from $846 million in 2001. Current law provides that community-based and faith-based organizations, in addition to local educational agencies, be eligible for program

Table 3. Indiana Charter Schools (As of July 12, 2002)

Sponsor	School Name	City	Grades	Enrollment	Start Year
Ball State University	Campagna Academy Charter School	Schererville, IN	11-12	16	2002-2003
Ball State University	Community Montessori, Inc.	Floyds Knobs, IN	K-4	74	2002-2003
Ball State University	Irvington Community School	Indianapolis, IN	K-5	96	2002-2003
Ball State University	New Community School	West Lafayette, IN	K-7	48	2002-2003
Ball State University	Timothy L. Johnson Academy	Fort Wayne, IN	K-5	250	2002-2003

Mayor's Office of Indianapolis	Flanner House Elementary School	Indianapolis, IN	K-5	150	2002-2003
Mayor's Office of Indianapolis	Christel House Academy	Indianapolis, IN	K-12	280	2002-2003
Mayor's Office of Indianapolis	The Imani School for Excellence	Indianapolis, IN	K-8	800	2003-2004

Source of Data: Indiana Department of Education, http://ideanet.doe.state.in.us/charterschools/chrschlsall.html

funding. Federal funds will also be available for state and local communities to establish and fund charter schools.

Concentrating resources on proven education methods. The NCLB Act will target education dollars to research-based programs proven to help children learn. This includes $900 million in 2002 that will be used to support the President's Reading First initiative designed to develop language and reading skills. The Early Reading First strategy promotes early language, literacy, and pre-reading development among pre-school children, particularly among those from low-income families. Additional funds are earmarked to encourage schools to increase teacher quality through training and recruitment strategies.

Ultimately, the NCLB Act will affect every school and school corporation in Indiana. Indiana has already taken the lead among the states in establishing highly challenging standards for reading and math, as well as science and social studies in grades K-12. The U.S. Department of Education has not yet finalized regulations or guidance documents. The Indiana Department of Education is working to clarify the requirements that full implementation of the NCLB will impose. There are a number of provisions coming into effect in the 2002-03 school year that will have immediate impact on schools and corporations; other provisions implemented in future school years will have significant long-term impact on Indiana's public education system.[9]

Table 4. Comparison of NCLB and Indiana Assessment Provisions

NCLB Provisions	Indiana's Status
English and math tests in each of grades 3-8 and once during grades 10-12.	With the planned addition of grades 4, 5, 7, and 9 ISTEP+ exams, Indiana will meet this requirement.
Science tests in each of three grade spans (3 - 5, 6 - 9, and 10 - 12).	With the planned addition of ISTEP+ exams and Core 40 science tests, Indiana will meet this requirement.
Assessment of English proficiency for students with limited English, beginning with the 2002-2003 school year.	Assessments currently exist in Indiana schools, school corporations will receive additional guidance from the Indiana Department of Education in meeting this requirement.

Alcohol, Tobacco, and Other Drug Use

Since 1991, the Indiana Prevention Resource Center (IPRC), with support from the Division of Mental Health and Addiction, has conducted an annual survey of alcohol, tobacco, and other drug (ATOD)[1] use among Indiana students in grades 6-12. In March and April of 2002, the IPRC collected data from 83,087 students in 269 Indiana schools.

The results of this year's survey show that, since 1997, there has been a slow, but steady decline in alcohol, tobacco, and drug use among Indiana's youth. In particular, rates of cigarette smoking have decreased markedly and slight decreases have been observed with alcohol and marijuana use. Despite these reductions, some alarming trends were observed in this year's data.

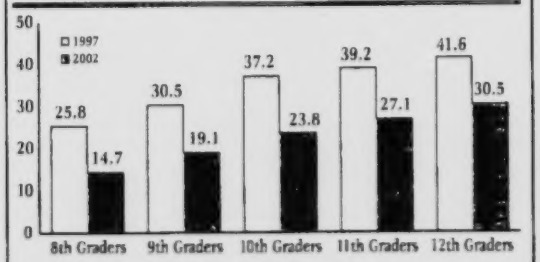
- Since 1991, rates of cigarette smoking among 12th graders in Indiana have exceeded national rates.[2]
- One in five Indiana high school seniors smoke cigarettes on a daily basis in 2002.
- Two out of five 8th graders in Indiana have already tried cigarettes.
- One in three high school seniors had tried binge drinking (consuming five or more drinks in one sitting) during the two weeks preceding the survey in 2002.
- Just under 50% of all high school seniors have tried marijuana at least once during their lifetime.
- One in ten high school students has used acid (LSD) and/or ecstasy (MDMA) by the time they graduate.

30

Cigarette smoking

Reductions in cigarette smoking have been most marked among Hoosier youth in grades 8-12. Since 1997, the percentage of 8th graders who reported smoking during the past month dropped from 25.8% to 14.7%. Similar decreases were found in grades 9-12 (Figure 1).

Figure 1. Reductions in Monthly Cigarette Smoking Among 8th - 12th Graders, Indiana: 1997, 2002

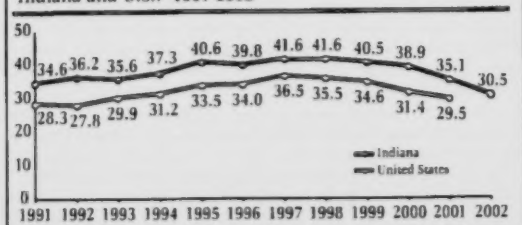


Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

One of the benefits of the observed decline in youthful cigarette smoking is the related potential for a future decline in the use of other drugs. Use of tobacco during adolescence is a powerful statistical predictor of subsequent drug use.[3] Cigarette smoking has been called a "gateway drug" that can lead to the use of other drugs. Youthful smokers are 10 to 50 times more likely than non-smokers to use marijuana, cocaine, and other illicit drugs. As such, declining rates of smoking among young Hoosiers should lead to future decreases in their use of other drugs.

Although smoking rates among youth in Indiana are decreasing, they still remain higher than national rates. The consistently higher rates of smoking among Hoosier 12th graders is also true of students in grades 8 and 10, the only other grades for which national data are available (Figure 2).

Figure 2. Percent of 12th Graders Using Cigarettes Monthly, Indiana and U.S.: 1991-2002



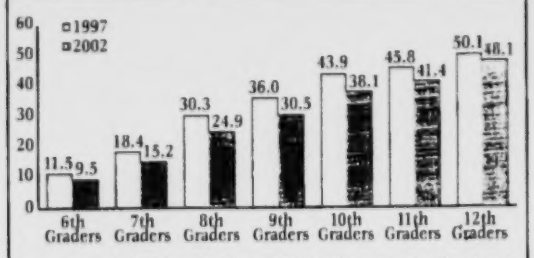
Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

Alcohol consumption

Alcoholic beverages – which include beer, wine, wine coolers, and hard liquor – are still the most commonly used substances among Indiana's youth. In 2002, 20.4% of 6th graders, 43.8% of 8th graders and 59.5% of 10th graders reported consuming alcohol during the past year.

Since 1997, the proportion of Hoosier youth who consumed alcohol during the month preceding the study has declined slightly for all grade levels (Figure 3). The declines have paralleled national

Figure 3. Reductions in Monthly Alcohol Use Among 6th - 12th Graders, Indiana: 1997, 2002



Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

declines, but haven't been as significant as those observed in other drugs such as cigarette smoking. In addition, the declines are smaller for

older students: for 8th graders, there has been nearly a 10% decrease in monthly use rates, while the rate for 12th graders has dropped only 2%.

These differences are even more important when behaviors related to drinking and driving are taken into account. In 2002, 24.3% of 12th graders reported they had driven a car while under the influence of alcohol during the past year. Included in that figure are the 8% of high school seniors who reported they had done this more than five times during the past year.

The data also show the following behaviors related to alcohol use among Indiana high school seniors.

- 44.6% had a hangover during the past year.
- 31.4% rode in a car with a drunk driver during the past year.
- 12.6% had missed school due to alcohol use during the past year.

Illicit Drug Use

Marijuana During the last decade, marijuana has been the most widely used illicit drug among Hoosier youth. Between 1992 and 1996, monthly marijuana use rates among Hoosier 12th graders increased from 14.4% to 25.4% (Figure 4). The decline since 1996 has been only slight (to 20.5%) and has not come close to offsetting the sharp increase seen in the early 1990s. While this trend is seen most markedly among high school seniors, it also holds true among Indiana youth in grades 6-11. Additional data from the 2002 survey shows that, among Hoosier youth who have used marijuana, the vast majority of them first try it between the ages 12-15.

Cocaine Only a very small proportion of Hoosier youth report using cocaine with any type of frequency. However, by the time students reach their senior year, nearly one in twelve report they have used cocaine at least once. Perhaps of greater concern is the fact that the percentage of high school seniors using cocaine at least once has increased since 1993 from 5% to 8.6% in 2002.

Ecstasy 2002 was the first year in which the use of "club drugs" such as ecstasy were assessed through Indiana's ATOD survey. Lifetime use rates for 8th, 10th, and 12th graders were slightly lower than national rates. However, nearly one in ten high school seniors has tried ecstasy at least once, with nearly 2% reporting use one to five times per month.

Afterschool Time

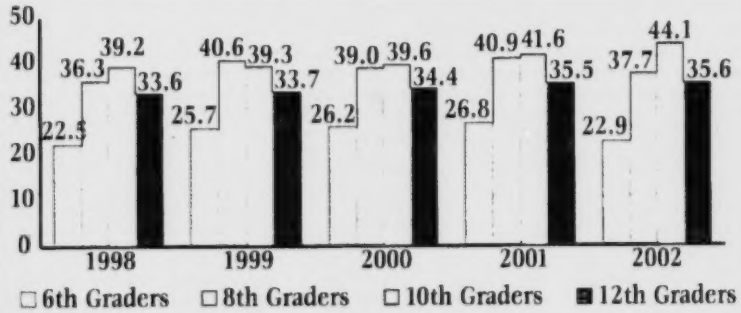
Through its annual survey of alcohol, tobacco, and other drug (ATOD) use, the Indiana Prevention Resource Center (IPRC) also collects data on how Hoosier youth in grades 6-12 spend their time after school.[1] The IPRC has been collecting data on afterschool time since 1995. However, in 1998 the IPRC changed the way in which it reported the data to make it user-friendly to youth workers and policymakers throughout the state by combining some of the categories to make them more inclusive.

Not all the data can be compared across years; in 2001, the IPRC added questions regarding volunteer and work patterns among Indiana students. The data is collected by having students report the estimated number of days per school year (out of 180 days) they spend engaging in various afterschool activities. If a student reports engaging in an activity for more than 30 days per school year, the IPRC classifies that activity as occurring on a regular basis.

How afterschool hours are spent

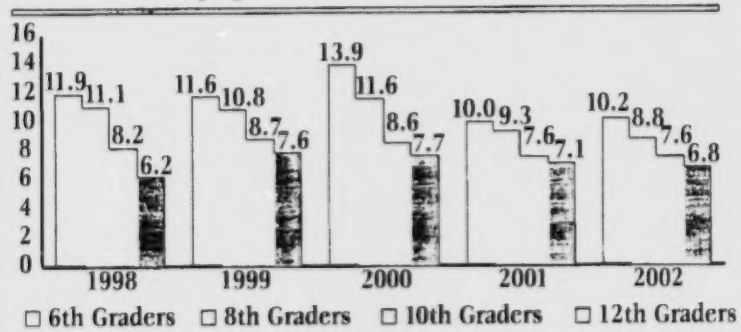
From 1998-2002, school sports were the most common activity in which Hoosier youth in grades 6-12 reported participation (Figure 1). The proportion of youth engaging in school sports increases with age, and peaks between the 8th and 10th grades.

Figure 1: Percent of Students Engaged in School Sports, Indiana: 1998-2002



Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

Figure 2: Percent of Youth Attending Youth Centers less than 10 Days per School Year: Indiana, 1998-2002



Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

The percentage of youth participating in activities at youth centers (such as the YMCA) decreases with age. In 1998, 8.1% of 6th graders reported spending time at a youth center on a regular basis during the school year, compared with 5.5% of 6th graders in 2002. Twelfth graders report the least amount of time spent at a youth center on a regular basis; in 1998, 5.2% spent time at a youth center compared with 4% of seniors in 2002. Most students who report spending time at a youth center after school report spending fewer than ten days per school year at the center (Figure 2).

The amount of time youth spend in supervised activities, such as 4-H and scouting programs, also decreases with age. Students in 6th and 8th grades are more likely to spend time in supervised activities than high school students.

- In 1998, 16.5% of 6th graders, 15.9% of 8th graders, 10% of 10th graders, and 7% of 12th graders reported participating in a supervised activity on a regular basis.
- In 2002, 13.8% of 6th graders, 13.5% of 8th graders, 8.6% of 10th graders, and 6.9% of 12th graders reported participating in a supervised activity on a regular basis.

Afterschool time without adult supervision

Many Hoosier youth report spending time at home after school without adult supervision. The afterschool hours during grades 6, 7, and 8 have been identified as "critical hours" for experimentation and early use of alcohol, tobacco, and other drugs. Data from the IPRC survey and other sources indicate youth are most likely to begin using drugs between the ages of 12 and 14. Experimentation with cigarette smoking and other drugs most often occurs between the hours of 3:00 and 6:00 p.m.

The proportion of 6th, 7th, and 8th graders who spend time alone after school without adult supervision on a regular basis (more than 30 days during the school year) has remained relatively unchanged since 1998.

- Over one-quarter (28.1%) of 6th graders in 1998 reported spending time alone after school, compared with 23.6% of 6th graders in 2002.
- Over one-third (38.2%) of 7th graders in 1998 reported spending time alone after school, compared with 34.5% of 7th graders in 2002.
- In 1998, nearly half (47.1%) of 8th graders reported spending time alone after school, compared with 44.3% of 8th graders in 2002.

Youth, work, and volunteerism

Many Hoosier youth report working outside of the home for money after school on a regular basis during the school year. In 2001 (the first year the IPRC began collecting this data), 13.2% of 6th graders, 21.6% of 8th graders, 42.5% of 10th graders, and 64.7% of 12th graders reported working outside the home for pay. The percentages decreased slightly in 2002 (Table 1).

Table 1: Percent of Students who Work for Pay Outside the Home, Indiana: 2001-2002

	2001	2002
6th Grade	13.20%	11.80%
8th Grade	21.60%	19.80%
10th Grade	42.50%	38.20%
12th Grade	64.70%	55.90%

Source of Data: Indiana Prevention Resource Center, Indiana University, Bloomington.

The proportion of Indiana youth who volunteer their time outside the home remains fairly consistent throughout middle and high school. In 2001 (the first year the IPRC began collecting this data), 9.4% of 6th graders, 10.3% of 8th graders, 10.7% of 10th graders, and 12.8% of 12th graders reported volunteering on a regular basis. In 2002, 8.7% of 6th graders, 11.8% of 8th graders, 10.5% of 10th graders, and 12.4% of 12th graders reported volunteering on a regular basis. High school seniors in 2001 and 2002 were slightly more likely than younger students to volunteer on a regular basis (more than 30 days per school year) than younger students.

[1] All data in this section come from: Indiana Prevention Resource Center, *Alcohol, Tobacco, and Other Drug Use by Indiana Children and Adolescents: Prevalence Statistics, Main Findings* (Bloomington, IN: Indiana Prevention Resource Center, Indiana University, Bloomington, August 2002). Full report at: www.drugs.indiana.edu.

Indicator Definitions and Data Sources

The following indicators are included in the state and county profiles. Data year definitions are as follows:

SFY State Fiscal Year: July 1 – June 30

SY School Year: From the beginning of the school term in the fall through the end of the summer (e.g., SY 2001 corresponds to the school term beginning fall 2000 and ending summer 2001)

FFY Federal Fiscal Year: October 1 – September 30

CY Calendar Year: January 1 – December 31

Economic Well-Being

% Children in Poverty, Age 0-17 (CY) – The percent of children younger than age 18 living in households with incomes below the federal poverty thresholds in 1990 and in 1998. The most recent county-level child poverty rates are reported. The federal poverty threshold is calculated annually and differs according to the size and composition of the household. In 1990, the poverty threshold for a 3-person household (one adult and two children) was $10,560; in 1998, the poverty threshold for such a family was $13,133.

Source of Data: U.S. Census Bureau, Current Population Survey.

Per Capita Income (CY) – The per capita income figure used comes from the Bureau of Economic Analysis data calculation of Per Capita Personal Income. This income measure is the total personal income of the residents in the state (or county) divided by the resident population in the state (or county) in 1990 and in 2000. Per capita personal income is often used as an indicator of the quality of consumer markets and of the economic well-being of the residents in the state (or county). Personal income is the income received by persons from all sources included in the Bureau of Economic Analysis personal income measure.

Source of Data: Bureau of Economic Analysis, U.S. Department of Commerce.

Unemployment Rate (CY) – The percent of unemployed persons ages 16 and older in the labor force in 1990 and in 2001; figures include persons looking for work.

Source of Data: Indiana Department of Workforce Development.

Monthly Average of Families Receiving TANF (SFY) – The average number of families per month who received Aid to Families with Dependent Children (AFDC) in SFY 1990, and the average number of families per month who received Temporary Assistance for Needy Families (TANF) in SFY 2001.

Source of Data: Indiana Family and Social Services Administration, Family Resources Bureau

Monthly Average of Persons Issued Food Stamps (SFY) – The average number of persons issued food stamps in 1990 and in 2001.

Source of Data: Indiana Family and Social Services Administration.

% of Students Receiving Free Lunches/Textbooks (SY) – Percent of public and private school students in grades K-12 who received free lunches and textbooks in 1991 and 2001. Students from families with incomes below 130% of the poverty guidelines are eligible for free meals. Under a state program initiated during the 1999-2000 school year, all public school students in Indiana who are eligible for free meals are also eligible for free textbooks.

Source of Data: Indiana Department of Education.

Early Childhood

# of First Steps Children Served (SFY) – The number of children from birth to age 3 with disabilities, developmental delays, or at significant risk for disabilities or delays who received services from the First Steps Early Intervention program in 2000 and in 2001.

# of Licensed Child Care Centers (SFY) – The number of child care centers licensed by the Indiana Family and Social Services Administration, Bureau of Child Development in 1990 and in 2001.

# of Licensed Child Care Homes (SFY) – The number of child care homes licensed by the Indiana Family and Social Services Administration, Bureau of Child Development in 1990 and in 2001.

# of Registered Child Care Ministries (SFY) – The number of child care ministries registered with the Indiana Family and Social Services Administration, Bureau of Child Development in 1993 and in 2001.

# of Licensed Child Care Spaces per 100 Children, Age 0-4 (SFY) - The capacity of licensed child care centers and homes in the county (or state) per 100 children ages 0-4 in 1996 and in 2001. This figure was calculated by dividing the capacity of all licensed centers and homes by the total number of children ages 0-4 in the county (or state) and multiplying the resulting figure by 100.

Source of Data: All early childhood data provided by the Indiana Family and Social Services Administration, Division of Family and Children, and the U.S. Census Bureau.

Annual Number of Children Receiving Child Care and Development Fund (CCDF) **Child Care Vouchers** (FFY) - The number of children whose child care arrangements were supported through Indiana's CCDF Child Care Voucher program in 2000 and in 2001. The CCDF Child Care Voucher program is administered by the Bureau of Child Development in the Indiana Family and Social Services Administration (FSSA) and subsidizes child care for children younger than age 13 with parents who are employed or in a training or educational program with incomes of 85% or less of the State Median Income.

Monthly Average of Children on Waiting List for Child Care and Development Fund (CCDF) Child Care Vouchers (FFY) - The average number of children who are waitlisted for financial assistance for child care support through Indiana's CCDF Child Care Voucher program in 1999 and in 2001.

Source of Data: Indiana Family and Social Services Administration, Division of Family and Children.

Child Protection

# of Reported Cases of Child Abuse Processed by CPS (SFY) - The number of reported cases of suspected child abuse processed by Child Protection Services (CPS) in 1990 and in 2001. Each reported case is investigated and a determination of case status made—i.e., as "substantiated" or "unsubstantiated."

% of Child Abuse Cases Substantiated by CPS (SFY) - The percent of cases that, following investigation by Child Protection Services, were determined to be substantiated child abuse in 1990 and in 2001.

# of Reported Cases of Child Neglect Processed by CPS (SFY) - The number of reported cases of suspected child neglect processed by Child Protection Services in 1990 and in 2001. Each reported case is investigated and a determination of case status made—i.e., as "substantiated" or "unsubstantiated."

% of Child Neglect Cases Substantiated by CPS (SFY) - The percent of cases that, following investigation by Child Protection Services, were determined to be substantiated child neglect in 1990 and in 2001.

# of Child Physical Abuse Cases Substantiated by CPS (SFY) - The number of cases that, following investigation by Child Protection Services, were determined to be substantiated child physical abuse in 1990 and in 2001. Substantiated child physical abuse numbers are included within the total number of substantiated child abuse cases.

# of Child Sexual Abuse Cases Substantiated by CPS (SFY) - The number of cases that, following investigation by Child Protection Services, were determined to be substantiated child sexual abuse in 1990 and in 2001. Substantiated child sexual abuse numbers are included within the total number of substantiated child abuse cases.

Child Abuse & Neglect Rate (SFY) - The rate of substantiated cases of child abuse and neglect per 1,000 children younger than age 18 in 1990 and in 2001.

# of Child Abuse & Neglect Deaths (SFY) - The number of deaths of children younger than age 18 that occurred as a consequence of abuse or neglect in 1990 and in 2001.

Source of Data: All child abuse and neglect data were supplied by the Indiana Family and Social Services Administration, Family Protection and Preservation Bureau.

# of Juvenile CHINS Case Filings (CY) - The number of cases filed in Indiana courts on behalf of children younger than age 18 who were alleged to be children in need of services (CHINS) because of abuse, neglect, or endangerment in 1990 and in 2001.

Source of Data: Supreme Court of Indiana, Division of State Court Administration.

Health & Well-being

Total # of Live Births (CY) – The total number of live births to women of all ages in 1990 and in 2000.

% of Low Birthweight Babies (CY) – The percent of infants born at a birthweight of less than 2,500 grams (about 5.5 pounds) in 1990 and in 2000.

% of Mothers who Reported Smoking During Pregnancy (CY) – The percent of women who reported they had smoked during pregnancy in 1990 and in 2000.

% of Mothers who Received 1st Trimester Prenatal Care (CY) – The percent of pregnant women who began care during the first three months of pregnancy in 1990 and in 2000.

Non-Marital Births as a % of All Births (CY) – Births to single mothers of all ages as a percentage of all live births in 1990 and in 2000.

# of Babies Born to Single Mothers Under Age 20 without a High School Diploma (CY) – The number of babies born to unmarried women under age 20 who have less than a high school education in 1990 and in 2000. This indicator was included because these risk factors are cumulative in their effect on the development and well-being of infants.

Teen Birth Rate, Ages 15-17 (CY) – The number of births to mothers ages 15-17 per 1,000 females in this age group in 1990 and in 2000.

Total # of Infant Deaths (CY) – The number of deaths from all causes among infants under one year of age in 1990 and in 2000. Deaths are reported by place of residence, not place of death.

Total # Child Deaths, Ages 1-14 (CY) – The number of deaths from all causes among children ages 1-14 in 1990 and in 2000. Deaths are reported by place of residence, not place of death.

Total # Teen Deaths by Accident, Homicide, and Suicide (CY) – The number of deaths among teens ages 15-19 due to accident, homicide, and suicide in 1990 and in 2000. Deaths are reported by place of residence, not place of death.

Source of Data: All pregnancy, birth, and mortality data supplied by the Indiana State Department of Health.

# of Children Enrolled in Hoosier Healthwise (SFY) – The number of children younger than age 19 who were enrolled in the Hoosier Healthwise program in May 1998 and in June 2002, not including blind and disabled children. Hoosier Healthwise is a program for children and pregnant women instituted July 1, 1998—funded through Medicaid and the Children's Health Insurance Program (CHIP). These figures include children enrolled in Hoosier Healthwise Package A that expanded eligibility for comprehensive medical and dental service to children younger than age 19 in families with incomes up to 150% of the federal poverty guideline. Hoosier Healthwise coverage is also available to children in families with incomes between 150-200% of the federal poverty guideline through a sliding scale of low premiums and co-payments (Package C).

Source of Data: Indiana Family and Social Services Administration.

% Noncompliance with Youth Tobacco Access Laws (CY) – The percent of retail sales outlets that were willing to sell tobacco products to minors. The data are based on annual compliance inspections conducted since 1997 by the Indiana State Excise Police on behalf of the Family and Social Services Administration, Division of Mental Health in accordance with federal Synar-Amendment legislation.

Source of Data: Institute for Drug Abuse Prevention, Indiana University, Bloomington.

Education, Grades K-12

Public School Enrollment, K-12 (SY) – The total enrollment in Indiana public schools, kindergarten through grade 12 during the 1989-90 school year and pre-kindergarten through grade 12 during the 2000-2001 school year.

Source of Data: Indiana Department of Education.

Non-Public School Enrollment, K-12 (SY) – The total enrollment in non-public schools (independent and parochial), kindergarten through grade 12 during the 1994-95 school year and the 2001-2002 school year. Comparable data were not available for earlier school years.

Source of Data: Indiana Non-Public School Association.

# of Home Schooled Children (SY) – The number of children being educated at home registered with the Indiana Department of Education (as required by state law) during the 1989-90 school year and the 2000-2001 school year.

Source of Data: Indiana Department of Education.

# of Alternative School Participants (SY) – The number of students in grades 6-12 who participated in public alternative school programs during the 1989-1990 school year and the 2001-2002 school year. These figures do not include students who attended private alternative schools or participated in a small number of public alternative school programs for students below the 6th grade.

Source of Data: Indiana Department of Education.

Total Per Pupil Expenditure (SY) – Total dollar amount spent per student enrolled in public schools in the county (or state) during the 1989-1990 school year and the 1999-2000 school year.

Source of Data: Indiana Department of Education.

% of 10th Graders Passing the GQE Math Standard (SY) – The percent of 10th graders in public schools who earned a passing score on the Math Standard of the Graduation Qualifying Exam during the 1999-2000 school year and the 2000-2001 school year. Earlier data were not available from the Department of Education.

Source of Data: Indiana Department of Education.

% of 10th Graders Passing the GQE Language Standard (SY) – The percent of 10th graders in public schools who earned a passing score on the Language Standard of the Graduation Qualifying Exam during the 1999-2000 school year and the 2000-2001 school year. Earlier data were not available from the Department of Education.

Source of Data: Indiana Department of Education.

# of Public High School Graduates (SY) – The number of students who graduated from Indiana public high schools during the 1989-1990 school year and the 2000-2001 school year.

Source of Data: Indiana Department of Education.

% of High School Graduates (SY) – The percent of students enrolled in 12th grade who graduated from public high schools during the 1989-1990 school year and the 2000-2001 school year.

Source of Data: Indiana Department of Education.

% of Freshman Class Graduating in 4 Years (SY) – The percent of freshman class graduating in 4 years for the 2000-2001 school year is calculated by dividing the number of public high school graduates for the 2000-2001 school year by the number of public high school freshmen from the 1997-1998 school year. The percent of freshman class graduating in 4 years for the 1989-1990 school year is calculated by dividing the number of public high school graduates for the 1989-1990 school year by the number of public high school freshmen from the 1986-1987 school year. Some figures exceed 100% in counties experiencing rapid rates of growth or consolidated high schools across county lines.

Source of Data: Indiana Department of Education. Calculations by the Indiana Youth Institute.

% of Grads Intending 4-Year College (SY) – The percent of public high school graduates indicating their intention to attend a 4-year college following graduation during the 1989-1990 school year and the 2000-2001 school year.

Source of Data: Indiana Department of Education.

% of Grads Intending Vocational/Tech School (SY) – The percent of public high school graduates indicating their intention to attend a vocational or technical school following graduation during the 1989-1990 school year and the 2000-2001 school year.

Source of Data: Indiana Department of Education.

# of Public School Student Dropouts (SY) – The number of public school students who dropped out of grades 7-12 during the 1989-1990 school year and the 2000-2001 school year. A dropout is a student who leaves school before graduation without transferring to another school or institution. Dropouts include students who fail to return to school following expulsion when eligible; students who transfer to adult programs, technical schools, GED programs, or to programs not leading to a high school diploma, and students who are incarcerated in adult institutions. Students who suffer from prolonged illness or die, suspended students, and students who transfer to another institution within an education program leading to a high school diploma are not defined as dropouts.

Source of Data: Indiana Department of Education.

# of Expulsions and Suspensions (SY) – The combined number of expulsions and suspensions for all causes in grades K-12 in public schools during the 1998-1999 school year and the 1999-2000 school year. Earlier data is not available as the Department of Education began collecting this information in SY 1997-1998.

Source of Data: Indiana Department of Education.

Juveniles and the Law

# of Juveniles Committed to the Department of Correction (SFY) – The number of children younger than age 18 committed to the Indiana Department of Correction in 1994 and in 2001. The Indiana Department of Correction changed its reporting system in 1994. Therefore, 1994 is used as the base year.

Source of Data: Indiana Department of Correction.

# of Juvenile Status Case Filings (CY) – The number of cases filed in Indiana courts on behalf of children younger than age 18 who were alleged to have committed status offenses (i.e., acts that would not have been defined as offenses if committed by an adult) in 1990 and in 2001.

Source of Data: Supreme Court of Indiana, Division of State Court Administration.

# of Juvenile Delinquency Case Filings (CY) – The number of cases filed in Indiana courts on behalf of children younger than age 18 who were alleged to be delinquent in 1990 and 2001.

Source of Data: Supreme Court of Indiana, Division of State Court Administration.

Child Population

Number of Children, Ages 0-4 – Total number of children ages 0-4 as enumerated by the 1990 and 2000 census.

Number of Children, Ages 5-9 – Total number of children ages 5-9 as enumerated by the 1990 and 2000 census.

Number of Children, Ages 10-14 – Total number of children ages 10-14 as enumerated by the 1990 and 2000 census.

Number of Children, Ages 15-19 – Total number of children ages 15-19 as enumerated by the 1990 and 2000 census.

Source of Data: All child population data were supplied by the U.S. Census Bureau.
